

Better decisions come from better observations

This is NoldusViso: A future-proof platform for recording, reviewing, and understanding behavior

NOLDUS

noldus.com/noldusviso

Capture everything, effortlessly

You want to observe behavior clearly and reliably. But in practice, you're dealing with multiple systems, complex setups, and limited flexibility. With NoldusViso, everything comes together in one platform.

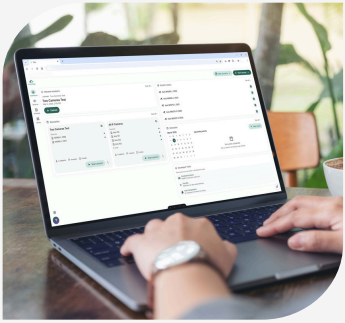

One integrated platform

No more switching between systems for recording, annotation, and review. Everything happens in one clear environment, so you always have a complete view of your sessions. Everything stays connected, from start to finish.

A setup that simply works

Avoid complex configurations and technical workarounds. NoldusViso lets you start a session, review it immediately, and move on without technical delays. No technical expertise needed to run or review your sessions.

Ready to grow with your needs

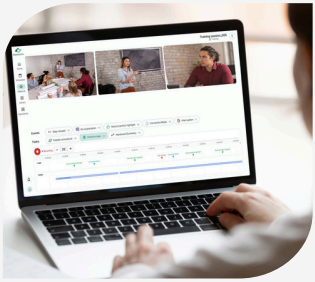

Start with a single room or scale to multiple locations. Add cameras, users, or setups without redesigning your entire system. Whether your setup grows gradually or quickly, your platform stays the same.

Meet NoldusViso

Recording is only step one. NoldusViso helps you find what matters, fast, so you're not stuck scrubbing through hours of footage. That's what makes it possible to act on what you see, not just record it.

Capture everything as it happens

Record video and audio from one or multiple cameras, across one or multiple rooms. You can follow everything live from a single interface and switch between rooms or camera views without interrupting the recording. This gives you full control during the session.

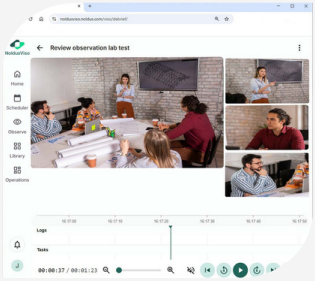

Mark what matters

Add markers during the session or afterwards. Each action is linked to the exact moment in the recording, so you can easily return to the exact moment something happened. You don’t need to search through long videos or keep separate notes.

Review and share without extra steps

Sessions are available immediately after recording, with all markers already in place. You can replay recordings, jump between events, and review specific moments without exporting or converting files. Invite others to watch or debrief sessions, so teams can review the same material together, even from different locations.

Secure by design

All recordings and session data stay within your own network. You control who can access, view, or manage sessions through clearly defined user roles. With built-in encryption and secure access, your data is protected without adding extra steps to your workflow.

Built for everyday use

Whether you are running a single observation room or managing a larger research, training, or simulation environment, NoldusViso is designed to support your work without adding complexity.

Designed to keep running

When a session starts, you want your system to be ready. NoldusViso helps you capture sessions reliably, while providing instant visibility into the status of cameras and devices so you can address issues before they disrupt the session.

Access it from any browser and start right away

NoldusViso runs entirely in the browser, bringing recording, annotation, review, and management together in one environment. No local software, fewer technical hurdles, and a smoother workflow for every user.

Start lean and grow when you need

Add rooms, cameras, and users without redesigning your setup. Whether you manage a single room or multiple locations, NoldusViso scales with your needs while keeping the same familiar workflow.

Your data is under your control

Keep recordings and session data within your own network. You can set the retention policy beforehand. Role-based access control, secure two-factor authentication, and encryption help protect sensitive information while supporting collaboration across teams.

Capture every room, every angle

Capture sessions across multiple rooms at the same time, while keeping all recordings synchronized. This makes it easy to compare activities, follow parallel scenarios, or manage larger training environments.

Review the moment it happens

Watch sessions live while they are being recorded and start reviewing immediately afterwards. Feedback, debriefing, and analysis can begin without waiting for recordings to be processed.

Find what matters faster

Search recordings, annotations, participants, and session information in seconds. Instead of scrolling through hours of video, go directly to the moments you want to review and spend more time interpreting your findings.

Turn observations into insights

Add markers and notes directly into the recording, live or in review. Every annotation remains linked to the exact moment it occurred, making review and analysis more efficient. Connect what happened, when it happened, and why it matters.

Ready for what's next

NoldusViso is built as a platform that can grow beyond recording and annotation. Future integrations such as eye tracking, emotion recognition, physiological data, and object recognition can help you bring multiple data streams together in one environment.

One platform for many applications

Education & training

Support learning through reflection.

Help students and professionals develop their skills by making experiences visible and discussable. Whether you are teaching communication skills, conducting mock interviews, or supporting practical exercises, NoldusViso helps turn everyday practice into meaningful learning moments.

Healthcare & simulation

Turn experience into learning.

Give instructors and participants a clear view of what happened during a scenario. By making interactions, decisions, and actions easier to revisit and discuss, NoldusViso supports effective debriefing and continuous improvement.

One platform for many applications

Behavioral research

Understand behavior with confidence.

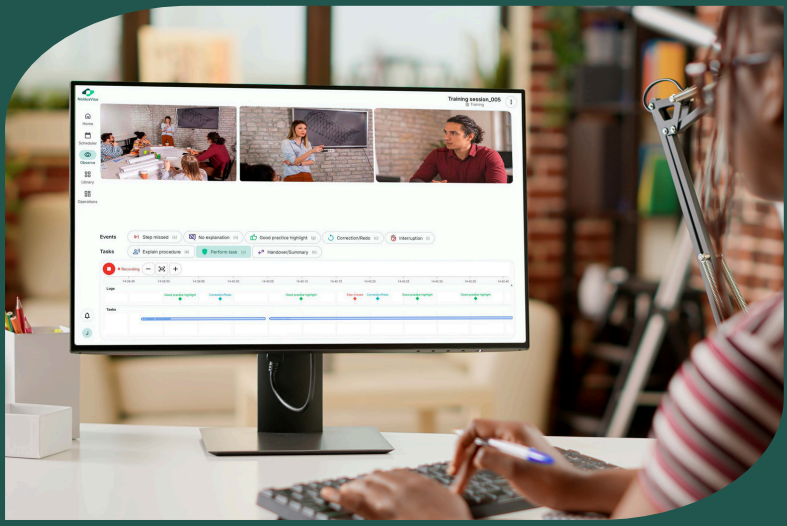

Study interactions, decision-making, and behavioral patterns in a structured and consistent way. NoldusViso helps researchers bring observations together, making it easier to explore findings, compare sessions, and build evidence-based conclusions.

Human factors & User experience (UX)

Turn observations into better decisions.

Understand how people interact with products, environments, and processes. By making user behavior easier to explore and discuss, NoldusViso helps teams identify opportunities for improvement and make informed design decisions.

Some systems stop at video. NoldusViso starts there.

Because what matters is what comes next.
Turn recordings into observations, observations into insights, and insights into better decisions.

Capture what happened?	Understand why did it happen?	Grow what's next?
AV recording	Structured annotation	Future-ready platform
Multi-room support	Indexed search	Multimodal roadmap
Enterprise security	Debrief workflows	APIs & integrations

See how NoldusViso fits your workflow.

Every research lab, training environment, and simulation center is different. A personal demo is the best way to explore how NoldusViso fits your workflow, your users, and your goals.

Whether you're planning a new facility, upgrading an existing setup, or looking for a more scalable platform, we'd be happy to show you what's possible.

Your personalized NoldusViso walkthrough

- See how you can record, annotate, and review in **one system**
- Explore how this fits your **current setup**
- **Get answers** to your questions from a Noldus specialist

Book your free demo

No preparation is needed. We'll guide you through the demo and tailor it to your situation. Participation is free and without obligation.

Is your lab ready for what's next?

Planning a new lab or upgrading an existing one? Use this checklist to identify your requirements and priorities.

Recording environment

- [ ] I need to record audio alongside video in one room
- [ ] I need to record audio alongside video in multiple rooms simulteaneously
- [ ] I need multiple camera angles in a room
- [ ] I need to capture screens or presentations
- [ ] I need to observe sessions live

Users & collaboration

- [ ] Multiple users need access to recordings
- [ ] Different user roles require different permissions
- [ ] I need to share sessions with remote viewers
- [ ] Multiple departments will use the system
- [ ] I need a central platform for all users

Review & analysis

- [ ] I want to annotate sessions during recording and/or afterwards
- [ ] I want to immediately debrief sessions after recording
- [ ] I want to quickly find specific moments in recordings
- [ ] I want to synchronize recordings and annotations
- [ ] I want to be able to record and debrief different sessions at the same time

IT & security

- [ ] Recordings must remain within our network
- [ ] We require role-based access control
- [ ] We require two-factor authentication
- [ ] The system must fit our existing IT environment
- [ ] We expect our setup to grow over time

Checked several boxes? We'd be happy to discuss your requirements.
